Monoclonal Anti-Influenza A Virus Nucleoprotein (NP), Clone DPJY03 (produced *in vitro*)

Catalog No. NR-19871

This reagent is the property of the U.S. Government.

For research use only. Not for human use.

Contributor:

Daniel R. Perez, Ph.D., Associate Professor of Virology, Department of Veterinary Medicine, College of Agricultural and Natural Resources, University of Maryland, College Park, Maryland, USA, provided under government contract

Manufacturer:

BEI Resources

Product Description:

Antibody Class: IgG2aκ

Mouse monoclonal antibody prepared against the nucleoprotein (NP) of influenza A virus was purified from clone DPJY03 hybridoma supernatant by protein G affinity chromatography. The B cell hybridoma was generated by the fusion of Sp2/0 mouse myeloma cells with splenocytes from BALB/c mice immunized by intraperitoneal injection with influenza A virus.[1]

All viruses with negative-sense RNA genomes encode a single-strand RNA-binding NP. The primary function of NP is to encapsidate the virus genome for the purposes of RNA transcription, replication and packaging.[2] NP serves as the structural protein in ribonucleoprotein particles and has been proposed to contain at least two different nuclear localization signals (NLS): an unconventional NLS, necessary for efficient synthesis of viral mRNA, and a bipartite NLS, which is essential for viral replication, likely due to its role in vRNA transcription.[3,4]

Material Provided:

Each vial of NR-19871 contains approximately 100 µL of purified monoclonal antibody in PBS. The concentration, expressed as mg per mL, is shown on the Certificate of Analysis.

Packaging/Storage:

NR-19871 was packaged aseptically in screw-capped plastic vials and is provided frozen on dry ice. The product should be stored at -20°C or colder immediately upon arrival. Freeze-thaw cycles should be avoided.

Functional Activity:

NR-19871 is reported to be reactive against the NP of avian, but not human, influenza A viruses in western blots and ELISA.[1]

NR-19871 is released without confirmation of functional activity.

Citation:

Acknowledgment for publications should read "The following reagent was obtained through BEI Resources, NIAID, NIH: Monoclonal Anti-Influenza Virus Nucleoprotein (NP), Clone DPJY03 (produced *in vitro*), NR-19871."

Biosafety Level: 1

Appropriate safety procedures should always be used with this material. Laboratory safety is discussed in the following publication: U.S. Department of Health and Human Services, Public Health Service, Centers for Disease Control and Prevention, and National Institutes of Health. Biosafety in Microbiological and Biomedical Laboratories. 5th ed. Washington, DC: U.S. Government Printing Office, 2009; see http://www.cdc.gov/biosafety/publications/bmbl5.htm.

Disclaimers:

You are authorized to use this product for research use only. It is not intended for human use.

Use of this product is subject to the terms and conditions of the BEI Resources Material Transfer Agreement (MTA). The MTA is available on our Web site at www.beiresources.org.

While BEI Resources uses reasonable efforts to include accurate and up-to-date information on this product sheet, neither ATCC® nor the U.S. Government makes any warranties or representations as to its accuracy. Citations from scientific literature and patents are provided for informational purposes only. Neither ATCC® nor the U.S. Government warrants that such information has been confirmed to be accurate.

This product is sent with the condition that you are responsible for its safe storage, handling, use and disposal. ATCC® and the U.S. Government are not liable for any damages or injuries arising from receipt and/or use of this product. While reasonable effort is made to ensure authenticity and reliability of materials on deposit, the U.S. Government, ATCC®, their suppliers and contributors to BEI Resources are not liable for damages arising from the misidentification or misrepresentation of products.

Use Restrictions:

This material is distributed for internal research, non-commercial purposes only. This material, its product or its derivatives may not be distributed to third parties. Except as performed under a U.S. Government contract, individuals contemplating commercial use of the material, its products or its derivatives must contact the contributor to determine if a license is required. U.S. Government contractors may need a license before first commercial sale.
