

Measles Virus, MVs/New Mexico.USA/6.11 [D4]

Catalog No. NR-52254

For research use only. Not for use in humans.

Contributor:

Bettina Bankamp, Ph.D., Division of Viral Diseases, Viral Vaccine Preventable Diseases Branch, Centers for Disease Control and Prevention, Atlanta, Georgia, USA

Manufacturer:

BEI Resources

Product Description:

Virus Classification: *Paramyxoviridae, Morbillivirus*

Species: Measles virus

Strain/Isolate: MVs/New Mexico.USA/6.11 [D4]

Genotype: D4

Original Source: Measles virus (MeV), MVs/New Mexico.USA/6.11 [D4] was collected from a nasopharyngeal swab in February 2011 in New Mexico, USA and was isolated on March 21, 2011.¹

Comments: MeV, MVs/New Mexico.USA/6.11 [D4] belongs to genotype D4 and the sequence of the nucleoprotein gene is available (GenBank: [JN005786](https://www.ncbi.nlm.nih.gov/nuccore/JN005786)).

MeV is a single-strand negative sense non-segmented RNA virus.² MeVs are divided into 8 clades, designated A through H, with 24 genotypes based on the sequences of the hemagglutinin (HA) and nucleoprotein (N) genes. The sequence of the 450 nucleotides that encode the carboxyl-terminal 150 amino acids of the nucleoprotein (N-450) is needed to determine the genotype.^{2,3} In 2018, four new genotypes were identified: B3, D4, D8 and H1. In 2000, measles was declared eliminated in the US by the WHO, but in 2019 the highest numbers of cases and outbreaks were reported.⁴

Material Provided:

Each vial contains approximately 1.0 mL of cell lysate and supernatant from *Cercopithecus aethiops* kidney epithelial cells with human signaling lymphocytic activation molecule (Vero E6-hSLAM) infected with MeV, MVs/New Mexico.USA/6.11 [D4].

Note: If homogeneity is required for your intended use, please purify prior to initiating work.

Packaging/Storage:

NR-52254 was packaged aseptically in screw-capped plastic cryovials. The product is provided frozen and should be stored at -60°C or colder immediately upon arrival. For long-term storage, the vapor phase of a liquid nitrogen freezer is recommended. Freeze-thaw cycles should be avoided.

Growth Conditions:

Host: *Cercopithecus aethiops* kidney epithelial cells with human signaling lymphocytic activation molecule (Vero E6-hSLAM)

Growth Medium: Dulbecco's Modified Eagle's Medium containing Earle's Balanced Salt Solution, non-essential amino acids, 2 mM L-glutamine, 1 mM sodium pyruvate and 1500 mg per L of sodium bicarbonate supplemented with 2% fetal bovine serum, or equivalent

Infection: Cells should be 70% to 90% confluent

Incubation: 2 to 4 days at 37°C and 5% CO₂

Cytopathic Effect: Syncytia formation

Citation:

Acknowledgment for publications should read "The following reagent was obtained through BEI Resources, NIAID, NIH: Measles Virus, MVs/New Mexico.USA/6.11 [D4], NR-52254."

Biosafety Level: 2

Appropriate safety procedures should always be used with this material. Laboratory safety is discussed in the following publication: U.S. Department of Health and Human Services, Public Health Service, Centers for Disease Control and Prevention, and National Institutes of Health. Biosafety in Microbiological and Biomedical Laboratories. 6th ed. Washington, DC: U.S. Government Printing Office, 2020; see www.cdc.gov/biosafety/publications/bmbl5/index.htm.

Disclaimers:

You are authorized to use this product for research use only. It is not intended for human use.

Use of this product is subject to the terms and conditions of the BEI Resources Material Transfer Agreement (MTA). The MTA is available on our Web site at www.beiresources.org.

While BEI Resources uses reasonable efforts to include accurate and up-to-date information on this product sheet, neither ATCC® nor the U.S. Government makes any warranties or representations as to its accuracy.
