

***Francisella tularensis* subsp. *novicida*, Strain ΔIglB**

Catalog No. NR-9709

Product Description: *Francisella tularensis* (*F. tularensis*) subsp. *novicida*, strain ΔIglB is a transposon mutant of the wild-type strain U112, in which the *iglB* gene region has been replaced with a mini-Tn5 insert, rendering it resistant to kanamycin.

Lot¹: 58607102

Manufacturing Date: 29MAY2009

TEST	SPECIFICATIONS	RESULTS
Phenotypic Analysis Cellular morphology Colony morphology ² Growth in the absence of cysteine Motility β-hemolysis X- and V-factor requirements CO ₂ requirement Biochemical tests Catalase Oxidase Urease Nitrate Indole Hydrogen sulfide production Glucose Maltose Sucrose Glycerol	Gram-negative coccobacillus Report results Growth Non-motile Non-hemolytic Negative Negative Positive Negative Negative Negative Negative Report results Positive Report results Positive Positive	Gram-negative coccobacillus Circular, low convex, entire, opaque and gray (Figure 1) Growth Non-motile Non-hemolytic Negative Negative Positive Negative Negative Negative Negative Positive Positive Negative Positive Positive
Genotypic Analysis Sequencing of 16S ribosomal RNA gene (~ 1440 bp)	Consistent with <i>F. tularensis</i>	Consistent with <i>F. tularensis</i>
Molecular Subtyping by PCR Amplification of Subspecies-Specific Sequence from Extracted DNA³	~ 1500 bp amplicon (subsp. <i>tularensis</i>) ~ 900 bp amplicon (subsp. <i>holarctica</i>) ~ 3300 bp amplicon (subsp. <i>novicida</i>)	~ 3300 bp amplicon (subsp. <i>novicida</i>)
Viability (post-freeze)²	Growth	Growth

¹*F. tularensis* subsp. *novicida*, strain ΔIglB was deposited by Francis E. Nano, Ph.D., Department of Biochemistry and Microbiology, University of Victoria, Victoria, British Columbia, Canada. NR-9709 was produced by inoculation of the deposited material into Brain Heart Infusion Broth and grown 24 hours at 37°C. Broth inoculum was added to Chocolate agar Kolles which were grown 24 hours at 37°C to produce this lot.

²24 hours at 37°C on chocolate agar (GC agar)
