

Bacteriophage Phi05_1745S/Pa1400, Infectious for *Pseudomonas aeruginosa*

Catalog No. HM-684

Product Description: Bacteriophage phi05_1745S/Pa1400 was derived from a blood sample taken from a patient with septicemia. Bacteriophage phi05_1745S/Pa1400 (HMP ID 9795) is a reference genome for The Human Microbiome Project (HMP).

Lot^{1,2}: 60277711

Manufacturing Date: 09SEP2011

TEST	SPECIFICATIONS	RESULTS
Plaque Morphology³	Report results	Circular
Titer³ Plaque-forming units (pfu) with <i>Pseudomonas aeruginosa</i>	>10 ⁶ pfu per mL	1.5 x 10 ¹¹ pfu per mL
Sterility	0.22 µm filtered	0.22 µm filtered
Bacterial Inactivation 10% of total yield plated on Tryptic Soy Agar with 5% defibrinated sheep blood ⁴	No viable bacteria detected	No viable bacteria detected

¹Quality control of HMP material is only performed to demonstrate that the product distributed by BEI Resources is identical to the deposited material. It should not be considered a complete characterization of the deposited material.

²The deposited material was added to a Luria-Burtani (LB) soft agar overlay (0.5%) supplemented with 10 mM MgSO₄ containing the phage host, *Pseudomonas aeruginosa*, strain Pa1400. The soft agar overlay was added to an LB agar Kolle supplemented with 10 mM MgSO₄ and incubated 24 hours at 30°C in an aerobic atmosphere. After two additional passages under the above conditions, the bacteriophage were harvested to produce this lot.

³Lysis was observed on the soft agar overlay after 24 hours at 30°C in an aerobic atmosphere.

⁴7 days at 37°C in an aerobic atmosphere

Date: 09 APR 2013
