

Peptide Array, SARS-Related Coronavirus 2 Non-Structural Protein 13 (NSP13)

Catalog No. NR-58702

This reagent is the property of the U.S. Government.

Product Description:

The 119-peptide array spans the non-structural protein 13 (NSP13) of the WIV04 strain of severe acute respiratory syndrome-related coronavirus 2 (SARS-CoV-2; GenPept: [QHR63259](#)). Peptides are 15-mers, with 10 amino acid overlaps.

Lot: 70056428

BEI Resources is committed to ensuring digital accessibility for people with disabilities. This Certificate of Analysis contains complex tables and may not be fully accessible. Please let us know if you encounter accessibility barriers and a fully accessible document will be provided: E-mail: Contact@BEIResources.org. We try to respond to feedback within 24 hours.

The following information applies to all peptides:

- Appearance White lyophilized powder
- Mass spectral analysis Correct MW by MALDI or Electrospray
- Counter Ion Trifluoroacetate

Peptide-specific information is shown in the tables and figures below.

Table 1: Peptide Analysis

¹Percent full length peptide. HPLC peaks for both target and pyroglutamyl (pGlu) forms of Peptides 3, 57, 107 and 118 were counted for final purity.

²HPLC analysis is inconclusive for Peptide 74 due to the hydrophobic nature of the sequence so purity instead is based on mass spectral analysis.

Peptide could not be purified on a column due to high hydrophobicity and poor solubility. All material were dialyzed.

³Remainder is salt and water
